# Prompt writing & writing with AI

University workshop / Ages 18–22

Templates, portfolio websites and professional writing

## A practical university workshop

Question to begin: What have you asked AI to write this week?

# The anatomy of a useful prompt

A CLASSROOM CHECKLIST, NOT AN OFFICIAL GPT FORMULA

| | | |
|---|---|---|
| 01 | **Task** | Write a workshop invitation |
| 02 | **Context** | Saturday, 10 am, Lab 2. Free entry. |
| 03 | **Audience** | First-year university students |
| 04 | **Format** | Subject + email, under 90 words |
| 05 | **Checks** | Use only facts. Flag missing details. |

GPT generates likely text from context. A precise brief guides the response. Facts still need checking.

# Three reusable prompt structures

CHOOSE A STRUCTURE THAT MATCHES THE TASK

## Direct instruction

Useful when the task is simple

> Explain a while loop to a beginner. Use one everyday analogy and a short Python example.

## Example-guided

Useful when style must repeat

> Match this pattern: “Built X to solve Y.” Turn my project notes into two sentences. Use only my facts.

## Review, then revise

Useful when a draft exists

> Review this draft for clarity and unsupported claims. Suggest changes first. Revise after I approve.

Examples guide patterns. Several examples are often called few-shot prompting.

# A small prompt experiment

PAIR DISCUSSION / 90 SECONDS

PROMPT A

> Write a good bio for me.

PROMPT B

> Write a 60-word portfolio bio for a second-year CSE student in Dhaka. Facts: knows Python and Arduino; built a line-following robot; seeking an embedded-systems internship. Use first person and a confident, simple tone. Use only these facts.

**Which brief gives the model enough information to write a useful bio?**

**B sets the audience, facts and format. A useful opening: “I am a second-year CSE student in Dhaka building my skills in Python and Arduino.”**

Same model. Score accuracy, audience and format: 0 = missing, 1 = partial, 2 = meets. Repeat the test.

# A portfolio needs evidence

## A ONE-PAGE STRUCTURE

AYESHA / STUDENT PORTFOLIO

**I build useful campus tools.**

**01 Selected projects**

Campus seat finder
Problem, my role, tools, outcome, proof link

**02 Skills & about** **03 Contact**

## ONE PROJECT STORY

Problem
Students struggled to find available study spaces.

Contribution
I designed the prototype and tested it with classmates.

Evidence
A short demo, screenshots and a clear note about limitations.

Fictional example. A small, well-explained project is useful evidence of your work.

# A portfolio website prompt

COPY-READY PROMPT

> Create a responsive one-page portfolio in one HTML file with embedded CSS. Audience: internship recruiters. Sections: introduction, two projects, skills, about, contact. Use the verified facts below. Each project needs my role, tools, outcome and a proof link. Use semantic headings, keyboard focus and readable contrast. Use placeholders for missing links. Include no invented achievements or working contact-form claims. Explain how to preview it. FACTS: [paste].

REVIEW BEFORE PUBLISHING

1. Mobile layout
2. Keyboard navigation
3. Working proof links
4. Real contact details

Workflow: save index.html, preview locally, fix issues, then publish. GitHub Pages is one option.

# Prompt lab: your portfolio brief

3-MINUTE PAIR ACTIVITY

## A portfolio brief for your next opportunity

Choose an internship, scholarship or club role.
Use one project you can explain yourself.

YOUR PARTNER CHECKS

01 A named audience

02 Specific, true evidence

03 A useful output format

04 A rule for missing information

Deliverable: one prompt. Swap it, identify a gap, then improve one instruction.

# The AI writing workflow

WRITING WITH AI

## You own the facts and the final judgment

AI can help organize a draft and revise language.
You remain responsible for what you submit.

1. Your notes
2. AI outline
3. Your review
4. Revised draft

Follow course or application rules for AI use and disclosure. Remove private data before sharing.

# SOP: Statement of Purpose

SOP USUALLY MEANS STATEMENT OF PURPOSE IN ADMISSIONS

| | |
|---|---|
| **Motivation** | What question or field interests you? |
| **Preparation** | What have you studied, built or investigated? |
| **Program fit** | Which verified course or research area connects? |
| **Direction** | What do you want to learn and do next? |

Each institution sets its own prompt and limits. Check the official requirements first.

# An SOP prompt and example

**PROMPT**

> Help me outline a Statement of Purpose for [program]. Use my factual notes and the program's official requirements below. First ask up to five questions about missing evidence or fit. Then propose a four-part outline. Draft only after I answer. Keep my voice. Do not invent awards, research, grades or faculty connections. NOTES: [paste]. REQUIREMENTS: [paste].

**WORKED EXCERPT / FICTIONAL STUDENT**

> Testing a line-following robot showed me how sensor placement can affect reliability. I handled the sensor tests and documented the failures. I now want to study embedded systems in greater depth and learn how to evaluate designs systematically.

**Why it works: a specific experience connects to a clear learning goal.**

The final SOP also needs verified program fit. AI should ask for evidence when details are missing.

# SOP: Standard Operating Procedure

THE OTHER MEANING OF SOP

## A repeatable procedure for a recurring task

Purpose, owner, prerequisites, actions, exceptions and completion check.

Prompt: Turn our approved room-booking steps into an SOP. Flag missing rules and preserve the approval authority.

EXAMPLE: CLUB MEETING ROOM

1. Check the shared calendar.
2. Submit the booking request to the club secretary.
3. Wait for written confirmation.
4. Record the booking and notify the team.

Illustrative procedure. The real club must confirm the owner, rules and exceptions.

# An email with one clear request

**PROMPT**

> Write a polite email under 100 words to Dr Rahman requesting a 15-minute project meeting. I am Ayesha, a second-year CSE student building a campus seat finder. I am available Tuesday 2–4 pm. Include a clear subject, one request and a respectful close. Do not claim we have met before.

**WORKED EMAIL / FICTIONAL EXAMPLE**

**Subject: 15-minute project meeting request**

Dear Dr Rahman,

I am Ayesha, a second-year CSE student building a campus seat finder. Could we meet for 15 minutes to discuss the project?

I am available Tuesday, 2–4 pm. Please let me know a suitable time.

Thank you,
Ayesha

Email structure: clear subject, brief context, one request and a respectful close.

# Email lab: tone without blame

REWRITE ACTIVITY / 90 SECONDS

ORIGINAL

> Sir, you did not reply. I need your approval now. Please do it ASAP.

**Task: keep the request, reduce blame, and make the next step clear.**

POSSIBLE REVISION

> Dear Dr Rahman,
>
> I am following up on my project approval request. Could you let me know whether any further information is needed?
>
> Thank you for your time.

Editing prompt: preserve the facts, remove blame, keep it under 70 words, and explain two edits.

# A blog begins with a useful question

EXAMPLE QUESTION

## How can students test a campus seat-finder prototype?

| | |
|---|---|
| **Hook** | A familiar problem: searching for a study space. |
| **Body** | What we built, how we tested it, what failed. |
| **Takeaway** | One small test readers can try themselves. |

PROMPT

> Plan a 500-word blog for first-year students using my notes and sources. Return a title, hook, three sections and a takeaway. Mark unsupported claims [SOURCE NEEDED].

Choose the reader and the useful question before asking for a full draft.

# A blog paragraph with evidence

FICTIONAL PROJECT NOTES: FIVE CLASSMATES TESTED THE PROTOTYPE

GENERIC DRAFT

> Our innovative app revolutionizes campus life and makes studying effortless for everyone.

EVIDENCE-BASED REVISION

> We asked five classmates to try our seat-finder prototype. Two could not find the filter button. We moved it above the results and plan to test the new layout with another group.

**What changed? Specific actions and observations replaced broad claims.**

Prompt: use only my notes, keep my voice, replace vague claims, and flag unsupported details.

# A report separates findings from opinion

A REUSABLE STRUCTURE FOR A SHORT PROJECT REPORT

| | |
|---|---|
| **Purpose** | What did you investigate? |
| **Method** | How did you collect the evidence? |
| **Findings** | What did the data show? |
| **Limitations** | What cannot you conclude? |
| **Next steps** | What action does the evidence support? |

Prompt: use only my data, show calculations with units, and separate observations from interpretation.

# Report lab: what do the numbers show?

FICTIONAL WORKSHOP DATA

| Week | Registered | Attended |
|---|---|---|
| 1 | 18 | 12 |
| 2 | 24 | 18 |
| 3 | 30 | 21 |

**Attendance rate = attended ÷ registered × 100**

DISCUSS BEFORE REVEALING

Which week had the highest rate?
What was the overall rate?
What can these data not explain?

**Week 2: 75%**
**Overall: 51 ÷ 72 × 100 ≈ 70.8%**
**The data do not explain why attendance changed.**

Cautious next step: ask absent registrants about barriers before changing the programme.

# LinkedIn: a profile backed by proof

## A STUDENT PROFILE CAN SHOW POTENTIAL THROUGH REAL WORK

| | |
|---|---|
| **Headline** | Current direction and relevant skills |
| **About** | What you care about, what you have done, what comes next |
| **Experience** | Your contribution and a truthful outcome |
| **Skills** | Skills you can explain and demonstrate |
| **Featured** | Portfolio, project demo or useful presentation |

Use role-relevant language when it matches your experience. No profile formula guarantees reach.

# LinkedIn: headline and About

FICTIONAL STUDENT EXAMPLE

BEFORE

> Student seeking opportunities

AFTER

> CSE student exploring embedded systems, with Python, Arduino and robotics project experience

ABOUT EXCERPT

> I am a second-year CSE student in Dhaka interested in embedded systems. In a line-following robot project, I handled sensor testing and documented failures. I am looking for an internship where I can strengthen my testing and development skills.

**Proof to add: a short robot demo and your testing notes.**

Prompt: generate headline options and an About section from verified facts, without inflated titles.

# Your 10-minute writing challenge

INDIVIDUAL WORK, THEN A PARTNER REVIEW

## Choose one real task

An SOP paragraph, a faculty email, a blog outline, a report summary or your LinkedIn About section.

2 min: build a brief
4 min: draft and revise
4 min: verify with a partner

READY TO USE?

- ☐ Every claim has evidence.
- ☐ The reader and purpose are clear.
- ☐ The structure is easy to follow.
- ☐ The next step is useful.
- ☐ AI use follows the relevant rules.
